

How to Configure Wireless Keypad in AX PRO Wireless Control Panel

Title:	How to Configure Wireless Keypad in AX PRO Wireless Control Panel	Version:	v1.0	Date:	12/08/2020
Product:	DS-PWA Series AX PRO Wireless Security Control Panel			Page:	1 of 2

Preparation

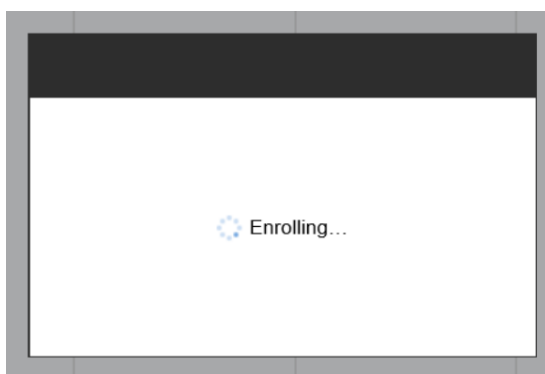

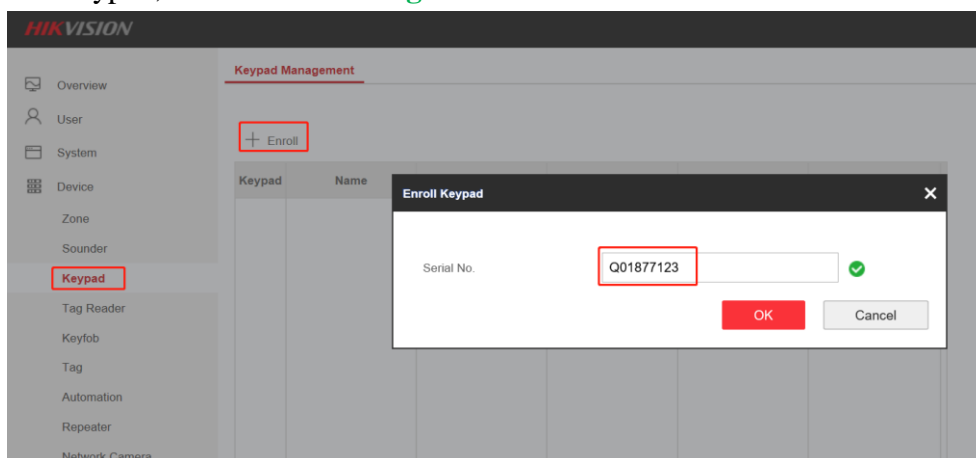

1. DS-PWA Series AX PRO Wireless Security Control Panel
2. Wireless Keypad DS-PK1-E-WE
3. IE explorer and App Hik-Connect

How to Configure Wireless Keypad in AX PRO Wireless Control Panel

The repeater can amplify signals between the control panel and the peripherals.

1. Add the Wireless Keypad to AX PRO

- 1) You can set the parameters of the keypad that is enrolled to the AX PRO
- 2) In the site, tap the AX PRO and then log in to the device.
- 3) Select Device---Keypad---Keypad management, click +Enroll
- 4) Enter serial number and click save, during add Enrolling process, Power ON Keypad, when the **Green light** flash 7 times means add success

5) Tap Edit Icon the keypad configuration

Function Button: If disabled, Keypad Fire Alarm, Panic Alarm, medical Alarm function will not be working

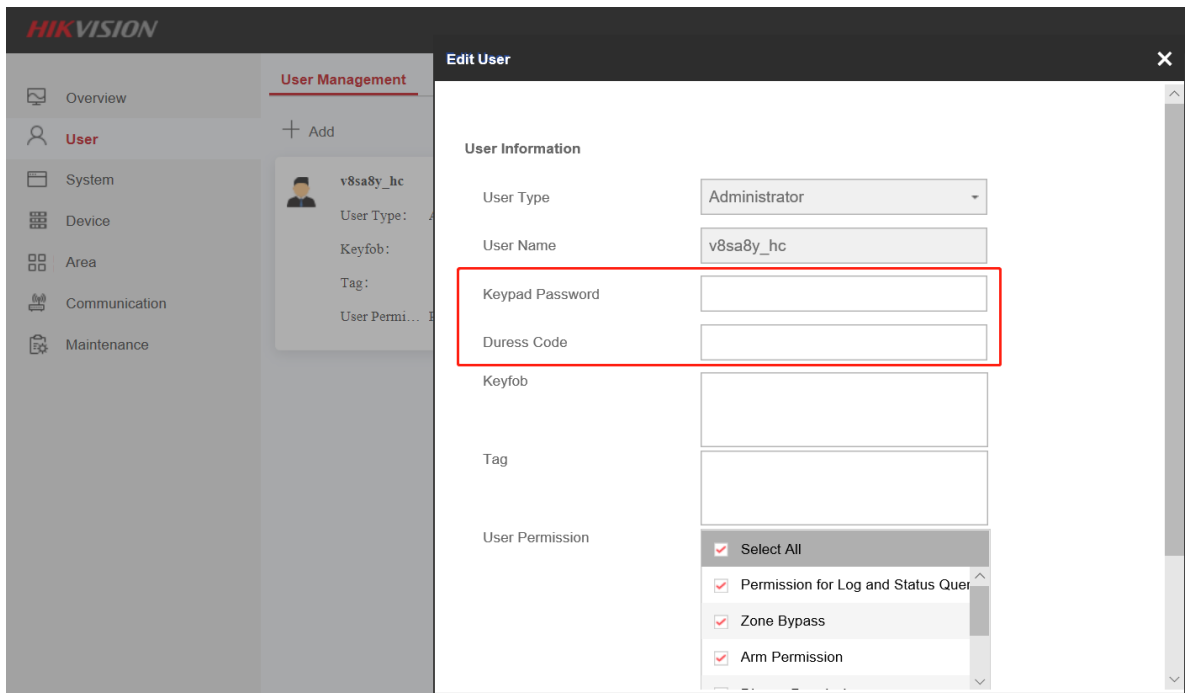

Arming Without Password: You can press the arm button directly, arm without password (Disarm need password)

2. How to Configure Keypad Password

User---User Management---Add or Edit user

- 1) **Edit Keypad Password:** If the target user is an administrator, an installer or an operator, you can tap the target user on the user list and then tap Edit Keypad Password to set the keypad password to the target user.
- 2) **Edit Duress Password:** If the target user is an administrator or an operator, you can tap the target user on the user list and then tap Edit Duress Password to set the duress password to the target user.

Note: Password is link to the user, so if user Deleted or Hik-Connect delete the Panel, the user's password will be invalid.

3. Wireless Keypad Command
